2.1 Identidades

$$\sum_{i=0}^n \binom{n}{i} = 2^n$$

$$\sum_{i=0}^n i \binom{n}{i} = n * 2^{n-1}$$

$$\sum_{i=m}^n i = \frac{n(n+1)}{2} - \frac{m(m-1)}{2} = \frac{(n+1-m)(n+m)}{2}$$

$$\sum_{i=0}^n i = \sum_{i=1}^n i = \frac{n(n+1)}{2}$$

$$\sum_{i=0}^n i^2 = \frac{n(n+1)(2n+1)}{6} = \frac{n^3}{3} + \frac{n^2}{2} + \frac{n}{6}$$

$$\sum_{i=0}^n i(i-1) = \frac{8}{6} \left(\frac{n}{2}\right) \left(\frac{n}{2} + 1\right) (n+1) \text{ (doubles)} \rightarrow \text{Sino ver caso impar y par}$$

$$\sum_{i=0}^n i^3 = \left(\frac{n(n+1)}{2}\right)^2 = \frac{n^4}{4} + \frac{n^3}{2} + \frac{n^2}{4} = \left[\sum_{i=1}^n i\right]^2$$

$$\sum_{i=0}^n i^4 = \frac{n(n+1)(2n+1)(3n^2+3n-1)}{30} = \frac{n^5}{5} + \frac{n^4}{2} + \frac{n^3}{3} - \frac{n}{30}$$

$$\sum_{i=0}^n i^p = \frac{(n+1)^{p+1}}{p+1} + \sum_{k=1}^p \frac{B_k}{p-k+1} \binom{p}{k} (n+1)^{p-k+1}$$

$$r = e - v + k + 1$$

Teorema de Pick: (Area, puntos interiores y puntos en el borde)

$$A = I + \frac{B}{2} - 1$$

2.2 Ec. Caracteristica

$$a_0 T(n) + a_1 T(n-1) + \dots + a_k T(n-k) = 0$$

$$p(x) = a_0 x^k + a_1 x^{k-1} + \dots + a_k$$

Sean r_1, r_2, \dots, r_q las raíces distintas, de mult. m_1, m_2, \dots, m_q

$$T(n) = \sum_{i=1}^q \sum_{j=0}^{m_i-1} c_{ij} n^j r_i^n$$

Las constantes c_{ij} se determinan por los casos base.

2.3 Extended euclid and diophantine equations

```

1 // ecuacion diofantica lineal
2 // sea d=gcd(a,b); la ecuacion a * x + b * y = c tiene soluciones enteras si
3 // d|c. La siguiente funcion nos sirve para esto. De forma general sera:
4 // x = x0 + (b/d)n      x0 = xx*c/d
5 // y = y0 - (a/d)n      y0 = yy*c/d
6 ll xx, yy, d;
7 void extendedEuclid(ll a, ll b) { // a * xx + b * yy = d
8     if (!b) {
9         xx = 1, yy = 0, d = a;
10        return;
11    }
12    extendedEuclid(b, a % b);
13    ll x1 = yy;
14    ll y1 = xx - (a / b) * yy;
15    xx = x1, yy = y1;
16 }
```

2.4 Modular operations

```

1 const ll MOD = 1000000007; // Change according to problem
2 // Only needed for MOD > 2^31
3 // Actually, for 2^31 < MOD < 2^63 it's usually better to use __int128
4 // and normal multiplication (* operator) instead of mulMod
5 // returns (a*b) %c, and minimize overflow
6 ll mulMod(ll a, ll b, ll m = MOD) { // O(log b)

2.20 Números Catalanés

Utiles para problemas de Combinatoria

$$Cat(n) = \frac{\binom{2n}{n+1}}{n+1} = \frac{(2n)!}{n!(n+1)!}$$

Con $Cat(0) = 1$.

- Diferentes aplicaciones:
1. Contar la cantidad de diferentes arboles binarios con n nodos que se pueden armar.
 2. Contar las formas en que un polígono convexo de $n + 2$ lados puede ser triangulado.
 3. Contar la cantidad de caminos monotonos a lo largo de los lados de una grilla $n * n$, que no cruzan la diagonal.
 4. Contar el número de expresiones que contienen n pares de paréntesis correctamente colocados

59         ans[q.id] = get_ans();
60     }
61 }

```

9 Juegos

9.1 Nim Game

Juego en el que hay N pilas, con objetos. Cada jugador debe sacar al menos un objeto de una pila. GANA el jugador que saca el último objeto.

$$P_0 \oplus P_1 \oplus \dots \oplus P_n = R$$

Si $R \neq 0$ gana el jugador 1.

9.1.1 Misere Game

Es un juego con las mismas reglas que Nim, pero PIERDE el que saca el último objeto. Entonces teniendo el resultado de la suma R , y si todas las pilas tienen 1 solo objeto $todos1=true$, podemos decir que el jugador2 GANA si:

$$(R=0) \& \neg todos1 \parallel (R \neq 0) \& todos1$$

9.2 Ajedrez

9.2.1 Non-Attacking N Queen

Utiliza: <algorithm>

Notas: todo es $O(!N \cdot N^2)$.

```
1 #define NQUEEN 8
2 #define abs(x) ((x)<0?(-(x)):(x))
3
4 int board[NQUEEN];
5 void inline init(){for(int i=0;i<NQUEEN;++i)board[i]=i;}
6 bool check(){
7     for(int i=0;i<NQUEEN;++i)
8         for(int j=i+1;j<NQUEEN;++j)
9             if(abs(i-j)==abs(board[i]-board[j]))
10                return false;
11     return true;
12 }
13 //en main
14 init();
15 do{
16     if(check()){
17         //process solution
18     }
19 }while(next_permutation(board,board+NQUEEN));
```

10 Utils

10.1 Compile C++20 with g++

```
1 g++ -std=c++20 {file} -o {filename}
2 Para Geany:
3 compile: g++ -DANARAP -std=c++20 -g -O2 -Wconversion -Wshadow -Wall -Wextra -c
4          "%f"
5 build:    g++ -DANARAP -std=c++20 -g -O2 -Wconversion -Wshadow -Wall -Wextra -o
6          "%e" "%f"
```

10.2 C++ utils mix

```
1 // 1- Random number generator (mt19937_64 for 64-bits version)
2 mt19937 rng(chrono::steady_clock::now().time_since_epoch().count());
3 // usage
4 rng()%k // random value [0,k)
5 shuffle(v.begin(), v.end(), rng); // vector random shuffle
6
7 // 2- Pragma
8 #pragma GCC optimize("O3,unroll-loops")
9 #pragma GCC target("avx2,bmi,bmi2,lzcnt,popcnt")
10
11 // 3- Custom comparator for set/map
12 struct comp {
13     bool operator()(const double& a, const double& b) const {
14         return a+EPS<b;}
15 };
16 set<double,comp> w; // or map<double,int,comp>
17
18 // 4- Iterate over non empty subsets of bitmask
19 for(int s=m;s;s=(s-1)&m) // Decreasing order
20 for (int s=0;s=s-m&m;) // Increasing order
21
22 // 5- Other bits operations
23 // Return the numbers the numbers of 1-bit in x
24 int __builtin_popcount (unsigned int x)
25 // Returns the number of trailing 0-bits in x. x=0 is undefined.
26 int __builtin_ctz (unsigned int x)
27 // Returns the number of leading 0-bits in x. x=0 is undefined.
28 int __builtin_clz (unsigned int x)
29 // x of type long long just add 'll' at the end of the function.
30 int __builtin_popcountll (unsigned long long x)
31 // Get the value of the least significant bit that is one.
32 v=(x&(-x))
33
34 // 6- Comparing floats
35 const double EPS = 1e-9 // usually correct, but not always
36 abs(x-y) < EPS // use this instead of x == y
37 x > y + EPS // use this instead of x > y (EPS "against" comparison)
38 x > y - EPS // use this instead of x >= y (EPS "in favor" of comparison)
39
40 // 7- string stream, convert types easily
```

```

41 string int_to_str(int x) {
42     stringstream ss;
43     ss << x;
44     string ret;
45     ss >> ret;
46     return ret;
47 }
48
49 // 8- Output
50 cout << setprecision(2) << fixed; // print floats with 2 decimal digits
51 cout << setfill(' ') << setw(3) << 2 << endl; // add spaces to the left
52
53 // 9- Input
54 string line;
55 getline(cin, line); // read whole line
56
57 cin >> noskipws; // make cin stop skipping white spaces
58 cin >> skipws; // make cin start skipping white spaces (on by default)
59

10.5 Funciones Utiles

Algo	Params	Función
fill, fill_n	f, l / n, elem	void llena [f, l) o [f,f+n) con elem
lower_bound, upper_bound	f, l, elem	it al primer ultimo donde se puede insertar elem para que quede ordenada
copy	f, l, resul	hace resul+i=f+i $\forall i$
find, find_if, find_first_of	f, l, elem / pred / f2, l2	it encuentra i $\in [f,l)$ tq. i==elem, pred(i), $i \in [f2,l2)$
count, count_if	f, l, elem/pred	cuenta elem, pred(i)
search	f, l, f2, l2	busca $[f2,l2) \in [f,l)$
replace, replace_if	f, l, old / pred, new	cambia old / pred(i) por new
lexicographical_compare	f1, l1, f2, l2	bool con $[f1,l1); [f2,l2]$
accumulate	f, l, i, [op]	$T = \sum / \text{oper de } [f,l)$
inner_product	f1, l1, f2, i	$T = i + [f1, l1) \cdot [f2, \dots)$
partial_sum	f, l, r, [op]	$r+i = \sum / \text{oper de } [f,f+i] \forall i \in [f,l)$
__builtin_ffs	unsigned int	Pos. del primer 1 desde la derecha
__builtin_clz	unsigned int	Cant. de ceros desde la izquierda.
__builtin_ctz	unsigned int	Cant. de ceros desde la derecha.
__builtin_popcount	unsigned int	Cant. de 1's en x.
__builtin_parity	unsigned int	1 si x es par, 0 si es impar.
__builtin_XXXXXXll	unsigned ll	= pero para long long's.
